

WBE Exploration

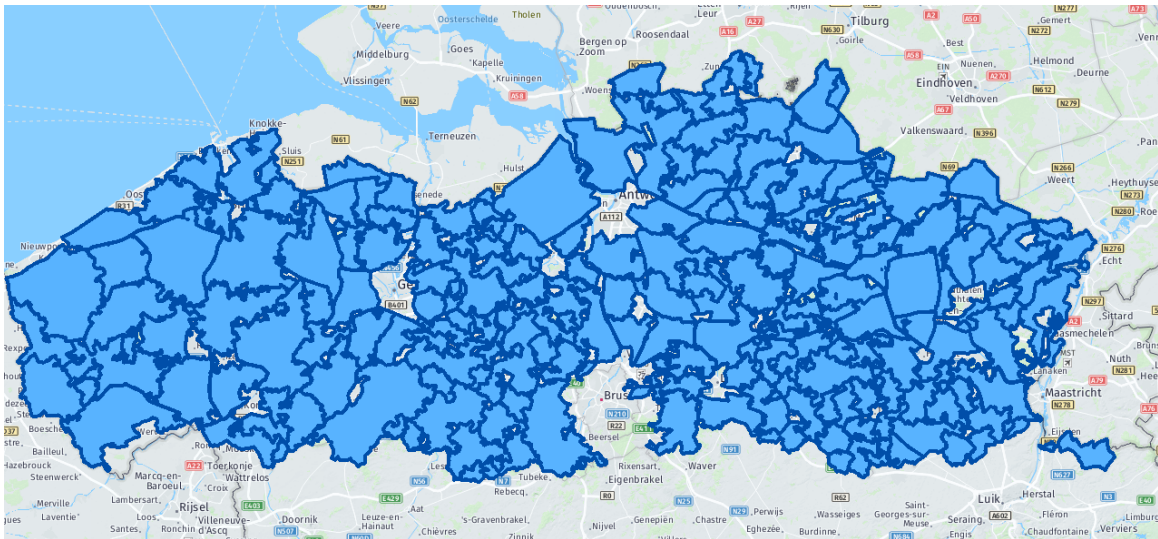

March 31, 2021

1 WBE

1.1 Scenarios

Scenarios:

- not colored as jachtgebied: not registered as jachtgebied e.g. city center
- colored as jachtgebied outside a WBE
- colored as jachtgebied inside a WBE, but not connected to this WBE e.g. property of the government that's not rented to a private hunter
- colored as jachtgebied inside a WBE, and connected to this WBE

In data we will have 2 extra variables:

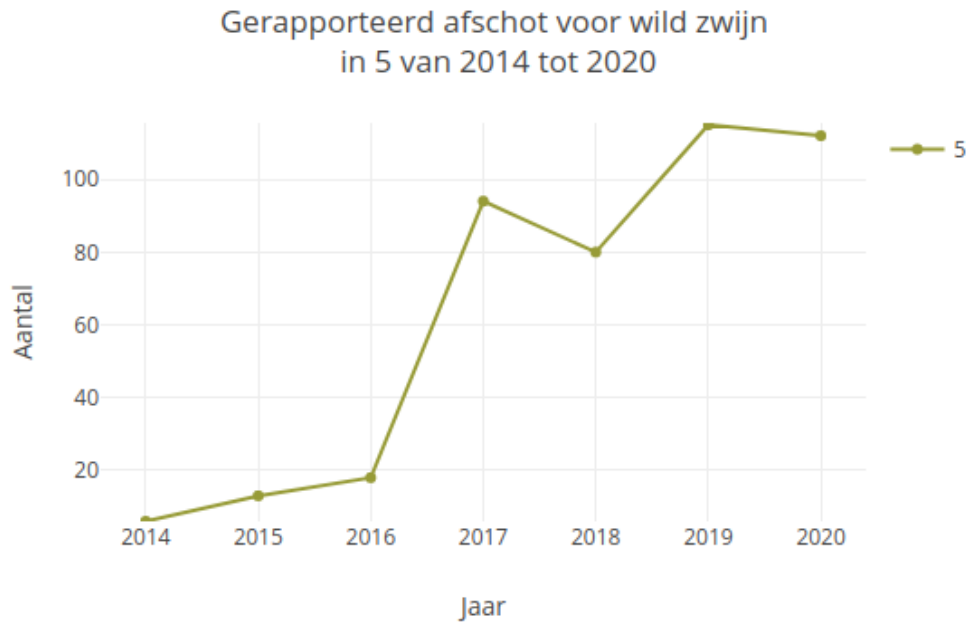

- WBE_toek: the WBE it is connected with
- WBE_georef: the WBE it was assigned to, not necessarily connected with it

We will work with 'WBE_toek', so the no. of animals connected with the selected WBE. In addition report the percentage of registered animals (I think WBE_toek/WBE_georef)

1.2 Changes to the App

- We won't be able to show evolution over multiple years for WBE as these regions changes over time. More specifically, the line plot below won't be visible. We can still show a barplot with the (total) number per selected region for the single year.

Evolutie gerapporteerd afschot Faunabeheerzones

 Download data

- Eenheid: single selection choice "Aantal/100ha"
- Popup window in map: report "WBE_toek" and additionally percentage "WBE_toek/WBE_georef"
- Regio-schaal (to be discussed): List with
 - Vlaanderen, Provincie, Gemeente
 - FBZ, WBE (binnen FBZ), Gemeente (binnen FBZ)
 - 5x5 UTM

1.3 Open Questions

- Which black borders do they want to show on the WBE maps? The FBZ or provinces? Or separate selection for each of them like we currently have for communes?

Gerapporteerd afschot voor wild zwijn in 2020
